Water Cannons in RWE Power Station Weisweiler

Dear Mr. Simon,

at the lignite fired RWE Power Station Weisweiler are 16 Clyde Bergemann Water Cannons in operation. Additionally there are 18 Clyde Bergemann Water Cannons in service at the Waste Incineration Plant Weisweiler.

The first installation of this new cleaning technology was in December 1991 at our steam generator unit "G", which is a 625-MWe-generating unit. This installation was the initial introduction of the new Water Cannon Technology to the German power generating industry.

By using the Clyde Bergemann Water Cannon Cleaning Technology we improved the utilisation and the cleaning efficiency of the combustion chambers at our power plant Weisweiler. Until today there is no thermo shock damage at the water walls of our steam generators, which is singular caused by using the Water Cannon Technology. The proper adjustment of the cleaning parameters and the professional operation of the Water Cannons are important facts to achieve these results.

We send you best regards.
