Experience with Water Canons (WLB) at VEAG Power Plant Boxberg

Dear Mr. Simon,

since beginning of 1991 there are in total 50 Water Canons in operation at VEAG Power Plant Boxberg (lignite fired boiler) there are seven units with 660 t/h (210 MW) and four units with 815 t/h (500 MW).

The blowing pattern are designed according to the furnace geometrie and ensure a sufficient cleaning effect with high availability of these blowers.

Up to now the cleaning with water has no negative influence on the wall tubes.

Due to the good experience with these blowers, 16 water canons will be installed in the furnace chamber of the new 900 MW unit, VEAG Kraftwerk Boxberg Werk IV.

Best Regards

VEAG Vereinigte Energiewerke AG
